COLLARS IPPC IN TRANSPORT

The transport functions are closely related to the flows of goods, the optimisation of which is the primary objective of logistics.

The following factors are of particular importance in this case: the relationship between the weight of the packaged goods and the weight of the packaging itself, as well as the dimensions and shapes of the packaging, which involves optimum use of the load capacity of the means of transport.

Wooden collars are one of the most universal protections for various types of goods, ranging from food products to mechanical equipment.

They are keenly used due to the ease of adjusting the size to the dimensions of the cargo and, above all, due to high resistance to loads and damage caused by external factors. They are suitable not only for various types of transport, but also for the storage process.

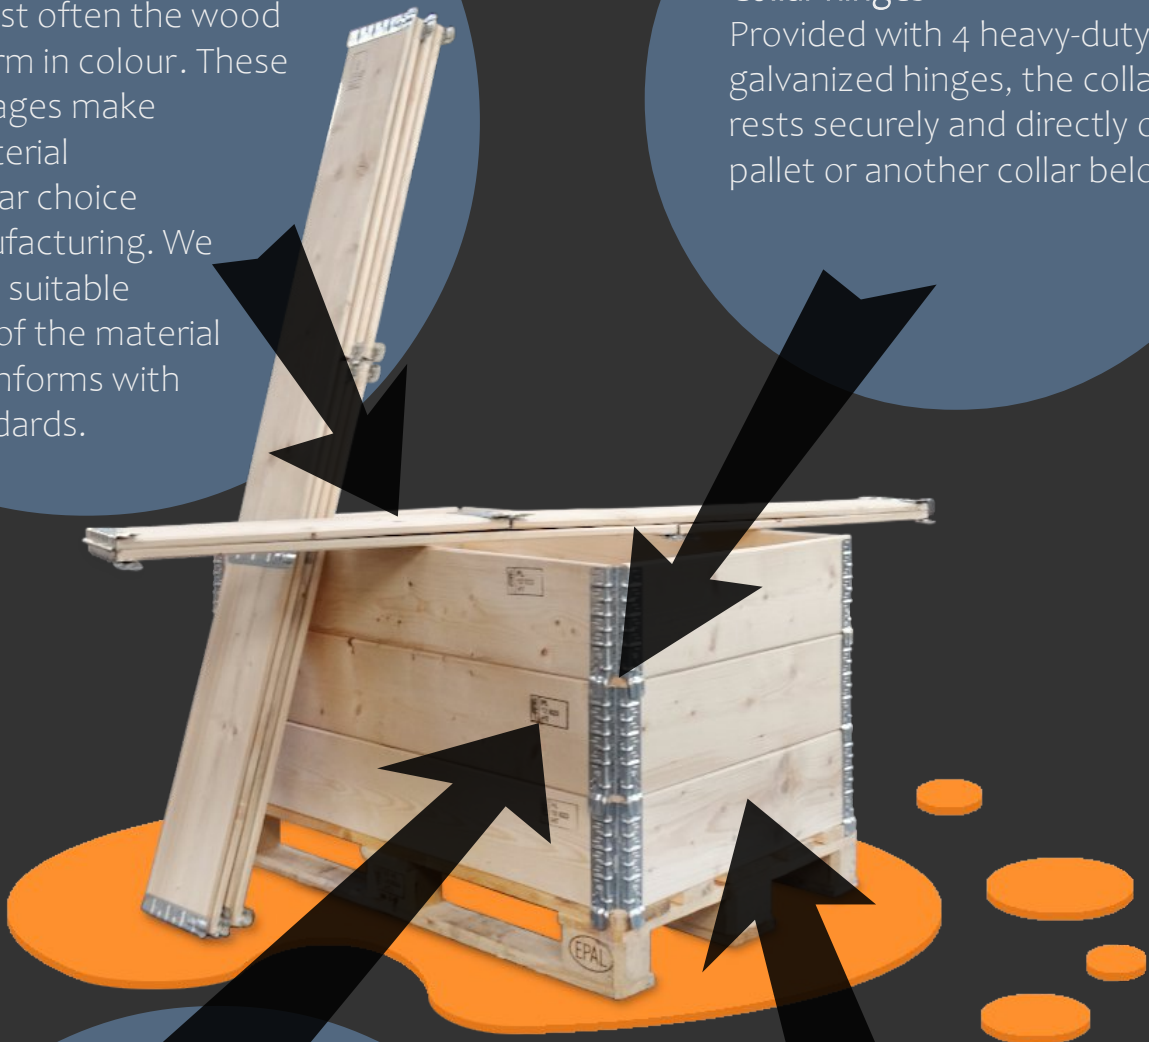

Collars Wooden IPPC

Spruce wood

The advantages include a low tendency to warp and expand or shrink with changes in moisture, and most often the wood is uniform in colour. These advantages make the material a popular choice in manufacturing. We select a suitable quality of the material so it conforms with all standards.

Collar hinges

Provided with 4 heavy-duty, galvanized hinges, the collar rests securely and directly on the pallet or another collar below it.

IPPC mark

The material is IPPC-certified by the Łukasiewicz Wood Technology Institute (Instytut Technologii Drewna) in Poznań, Poland. The IPPC certification confirms that the technical and organisational conditions of the manufacturer ensure compliance of the production of collars with the EU phytosanitary regulations.

Plank dimensions

Outer length: any
Outer width: any
Outer height: 197 mm
Planks planed and chamfered all round
Brand-new product

Advantages of IPPC-certified wooden collars

- Standard sizes
- Reusable
- Customizable applications
- Robust and simple design
- Long life
- Easily replaceable if damaged
- Folding to save on storage space
- Affordable pricing for cost-efficiency of wooden packaging
